

Student Information

- **Name:** Pratyush Banerjee
 - **Registration Number:** 25BCE10655
 - **Program:** B.Tech (Computer Science and Engineering)
 - **Course Code:** CSE0001 – Digital Literacy
-

Introduction:

This project was completed as part of the Digital Literacy course. The main goal was to build a solid foundation in the digital skills required for engineering students today. Throughout the project, I worked on several practical tasks including designing educational infographics, setting up a professional portfolio across different platforms, mastering GitHub for version control, and practicing professional communication. I also spent time researching cybercrime trends to better understand how to stay safe online and help others do the same. This project also served as a practical exercise in becoming a 'Digital Ambassador,' where I learned to translate complex technical concepts into accessible information for my peers. Beyond just completing the assignments, I focused on creating a cohesive digital identity that reflects my growth as a Computer Science student. By the end of these modules, I have developed a toolkit that includes everything from graphic design and data collection to technical repository management and professional networking. These skills are not just for this course but are essential for my academic success at VIT and my future career in the global tech industry.

Project Tasks

Task 1: Digital Literacy Infographic For this task, I used Canva to design an infographic focused on digital safety and literacy. To make it more effective, I created a Google Form to gather data from my peers regarding their online habits. This helped me understand the common gaps in digital awareness and allowed me to present that information in a clear, visual way.

Task 2: Digital Portfolio I set up a professional digital presence on LinkedIn, GitHub, and Kaggle. A key part of this was creating a specialized "Profile README" in a repository named after my username. In this README, I included my branch, year of study, and my specific learning goals for the next four years.

Task 3: Platforms Exploration (GitHub Basics) In this module, I learned how to use GitHub professionally. I created a structured repository named Digital-Literacy-Assignment and organized my work into specific folders (Task 1 through Task 5). I practiced using Markdown for documentation and learned how to manage files and commits effectively.

Task 4: Email Etiquette I focused on professional communication by drafting two formal emails: one for an internship inquiry and another for an assignment extension request. I also compiled a social media "Do's and Don'ts" checklist to ensure that my digital footprint remains professional as I move toward my career.

Task 5: Cybercrime Awareness I researched a realistic case study on UPI and Online Payment Fraud, which is very relevant in India today. I documented how these scams work step-by-step and created a prevention checklist. I also included the official reporting channels like the 1930 helpline and the National Cyber Crime Portal.

Tools & Platforms Used

- **Design:** Canva (for the infographic)
 - **Code & Documentation:** GitHub, VS Code, Markdown
 - **Networking:** LinkedIn
 - **Data Collection:** Google Forms
-

Conclusion

This project has been a great way to improve my practical digital skills. It moved beyond just theory and allowed me to actually build a portfolio and learn how to use professional tools like GitHub. I now have a much better understanding of how to behave responsibly online and how to present myself professionally to future employers.
